Name of the Service	Modelling Service for Water Supply Systems
Description of the Service	Modelling Service for Water Supply Systems (MSWSS) is a service for modeling and analysis of Water Supply Systems which will integrate the analysis of toxics in drinking-water supply networks with water distribution network simulation. MSWSS service will allow water infrastructure operators and researchers to analyse hazardous events (e.g. toxics propagation within a pipe system) and may be used for preparation of risk management plans for water utilities. The EOSC computing infrastructure and data sharing services enable modelling of more complex water supply systems and increase the number of scenarios for the analysis.
